

Diagram illustrating a decomposition of a complex polygonal structure into three simpler components.

The left side shows a complex polygonal structure composed of several interconnected polygons. A specific path or boundary within this structure is highlighted with a thick black line and labeled ϕ_w .

The right side shows the decomposition of this structure into three separate polygons, each labeled with a boundary component:

- A polygon labeled ϕ_{p_1} .
- A polygon labeled ϕ_{p_2} .
- A polygon labeled ϕ_{p_3} .

The equation is represented as:

$$\text{Complex Structure} = \phi_{p_1} \times \phi_{p_2} \times \phi_{p_3}$$
